Professional Summary

B.Tech student specializing in Computer Science and Engineering (Data Science), with an interest in frontend development and software engineering. Familiar with HTML, CSS, Java, and Python, with hands-on project experience in web application development and Arduino-based embedded systems. Eager to learn new technologies, strengthen problem-solving skills, and contribute to real-world projects through an internship opportunity.

Education

St. Peter's Engineering College, Hyderabad
B.Tech in Computer Science and Engineering (Data Science)
(2025 – 2028) | Present CGPA: 8.1

Government Polytechnic, Mahabubnagar
Diploma in Electronics and Communication Engineering
(2022 – 2025) | CGPA: 7.8

Holy Angels High School, Hyderabad
Secondary School Education (Class X)
May 2022 | CGPA: 8.7

Projects

Alcohol Sensing Alert System – Engine Off Technology **2025**
Technologies: Arduino Nano, Embedded C/C++, MQ-3 Alcohol Sensor, Relay Module

- Developed an Arduino-based vehicle safety prototype designed to detect alcohol vapors and help prevent drunk driving.
- Integrated an MQ-3 alcohol sensor with an Arduino Nano to collect and process sensor readings against a predefined threshold.
- Designed a relay-based ignition cutoff mechanism to prevent engine starting when alcohol detection exceeds the configured threshold.
- Incorporated a warning mechanism to alert the driver when potential alcohol consumption is detected.
- Explored safety features, including emergency override and fail-safe operation, to improve the reliability of the proposed system.

VetCare – Veterinary Clinic & Pet Care Management System **Present - 2026**
Technologies: React, JavaScript, HTML, CSS | **Tools:** Antigravity (AI-assisted development)

- Developed an AI-assisted veterinary care web application to help pet owners manage pet profiles, healthcare records, and clinic appointments.
- Built a React-based user interface with separate workflows for pet owners and veterinary clinics.
- Implemented pet profile management and appointment booking workflows, including appointment status management.
- Designed responsive UI components for clinic discovery, pet health history, and appointment management.
- Used AI-assisted development tools to generate and refine application components, troubleshoot issues, and improve the development workflow.

CivicTrust – Complaint Management Portal **Present – 2026**
Technologies: React, JavaScript, HTML, CSS | **Tools:** Antigravity (AI-assisted development)

- Designed an AI-assisted development workflow to build a web-based complaint management portal for complaint registration, tracking, and resolution.
- Developed a structured user interface with separate role-oriented workflows for citizens, department staff, and administrators.
- Designed complaint management dashboards, navigation flows, and administrative interfaces to improve usability and transparency.
- Created responsive UI layouts for complaint handling, status tracking, and role-specific application pages.
- Used AI-assisted development tools to generate and refine interface components, troubleshoot functional issues, and improve the development workflow.

Technical Skills

Frontend Development: HTML, CSS, JavaScript
Languages: Java, Python, C,C++, R
Database Management: SQL,MySQL.
Frameworks: React, Node.js
Developer Tools: Git, Git Hub, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse
